

RESIDENTIAL CONCEPT PROPOSAL

CONCRETE ASCENT

A Two-Storey Brutalist Loft in a New York Skyscraper

Board-formed concrete · double-height void · panoramic glazing
Levels 41–42 · Manhattan, New York

The Concept: Brutalism in the Sky

Honest concrete, monumental volume, and daylight — raw materiality elevated 41 floors above Manhattan.

► Brutalist DNA

Cast-in-place, board-formed concrete left exposed on walls, ceilings and the staircase — texture, tie holes and all. Strength expressed, nothing hidden.

► Vertical loft typology

A classic New York industrial loft rotated 90°: two stacked levels wrapped around a 5-metre double-height void.

► Light as material

Floor-to-ceiling glazing, a roof skylight and an open void flood the concrete with moving daylight, softening its mass.

► Sanctuary above the city

Public life below, private life above — the tower's height turns the apartment into a quiet concrete observatory.

Two Floors, Two Moods

104 m² per level · 208 m² total · clear functional split between social and private life

► LEVEL 1 — Social & Wellness

Entry foyer · gym · open kitchen with island · dining for six · TV lounge with generous sofas — all wrapped around the double-height void.

► LEVEL 2 — Private & Work

Master bedroom · walk-in shower suite · home office with skyline view · library landing overlooking the living space below.

► The connective tissue

A sculptural cast-concrete stair; a glazed balustrade keeps the void visually open; service core (risers, HVAC) clad in raw concrete.

LEVEL 1

Entry · Gym · Kitchen · Dining · Living/TV

LEVEL 2

Bedroom · Shower suite · Office

VERTICAL

Concrete stair · double-height void · skylight

Level 1 • Social & Wellness Floor

Kitchen, gym, dining and TV lounge — everything for daily living and entertaining, on one open plane

CONCRETE ASCENT | BRUTALIST LOFT TOWER — MANHATTAN, NY

PLAN — LEVEL 1

Scale 1:75 · social floor: entry · gym · kitchen · dining · living + double-height void

► Open kitchen

Cast-in-place concrete island, induction hob, full-height pantry wall — cook while facing the skyline and the room.

► Gym with mirror wall

Rack, cardio, free weights and fold-out mats; floor-to-ceiling mirrors amplify daylight and views.

► TV lounge

Deep L-shaped sofas oriented to a board-formed concrete media wall; rug zone keeps acoustics soft.

► Dining for six

Anchored between kitchen and glazing — morning light at breakfast, city glow at dinner.

► Entry foyer

Concrete bench and console; pivot door; sightline straight through the void to the skyline.

Level 2 • Private & Work Floor

Bedroom, shower suite and office upstairs — rest, wellness and focus above the city's noise

CONCRETE ASCENT | BRUTALIST LOFT TOWER — MANHATTAN, NY

PLAN — LEVEL 2

Scale 1:75 • private floor: bedroom • shower suite • office + void overlook

► Master bedroom

2.0 × 2.2 m bed, full wardrobe wall; blackout rollers + sheer linen for total light control.

► Walk-in shower suite

Rain head, concrete vanity, WC; heated concrete floor and a privacy glass panel.

► Home office

Desk positioned at the corner glazing with a direct skyline view — shelving wall behind, void beside.

► Library landing

The stair arrival doubles as a reading nook overlooking the living room below.

► Glass balustrade

Frameless glazing along the void keeps the floor plate bright and visually connected.

Section A-A • How the Loft Stacks

4.40 m level-to-level • 5.0 m void • full-height glazing + roof skylight drive the daylight deep into the plan

► Board-formed core

Structure and finish in one: concrete walls, slabs and stair carry the brutalist language through every surface.

► Radiant heated floors

Warm concrete underfoot — silent, even heat with no visible radiators to clutter the architecture.

► Acoustic plaster ceiling

Softens sound inside the hard shell; concrete mass blocks the city's drone from outside.

► Skylight over void

Sunlight drops two storeys into the living space, animating the concrete through the day.

The Conveniences of a Two-Storey Loft

Why stacking the program beats a single-level apartment — for living, working and resting

► Natural zoning

Kitchen, gym, TV and sofas downstairs; bedroom, shower and office upstairs. No doors needed — the stair does the separating.

► True rest upstairs

Bedroom is two floor slabs and a stair-run away from the TV, blender and treadmill — genuinely quiet sleep 41 floors up.

► Separation of routines

One person can work late in the office while another watches a movie below — no headphone negotiations.

► Guests without exposure

Entertain on level 1; the entire private floor stays untouched and clutter-free.

► The void as experience

The double-height space makes 208 m² feel like a townhouse in the sky — drama no flat plan can match.

► Better daylight, twice

Two window levels mean morning light reaches the kitchen and evening light reaches the bedroom and desk.

► Vertical exercise bonus

The concrete stair adds incidental daily movement between floors — a built-in wellness feature.

► Higher value & flexibility

Stacked lofts are rarer and more desirable; the office converts easily to a nursery or guest room.

Concrete First, Everything Else Honest

A restrained palette that keeps the architecture in charge

Cast-in-place concrete

Board-formed walls, slabs & stair — the structural finish IS the interior finish.

Glass

Floor-to-ceiling low-iron glazing; frameless balustrade; skylight.

Raw blackened steel

Window frames, office desk structure, kitchen hood and shelving.

Charcoal wool & linen

Sofas, bedding and curtains — texture against the hard shell.

White oak accents

Kitchen stool seats, bedside details — warmth in measured doses.

Polished concrete floor

Radiant heated, sealed — continuous across level 1, timber-look finish upstairs.

Concrete That Never Feels Dark

Four coordinated moves pull daylight through both storeys from sunrise to sunset

► 1 • Full-height glazing

The south-west facade opens level 1 entirely to the skyline; low-iron glass maximises visible light transmission.

► 2 • Double-height void

Acts as a light chimney — level 2 borrows daylight from the living room's big windows, keeping the stair and landing bright all day.

► 3 • Roof skylight

A 2.6 m skylight over the void drops sun two storeys deep, sweeping across the concrete walls as the day progresses.

► 4 • Open balustrade & interior glazing

Frameless glass at the void edge and borrowed light between office and stair means no windowless rooms anywhere in the loft.

Specification Sheet

Key figures and comfort systems at a glance

Gross internal area

208 m² (2 × 104 m²)

Ceiling heights

3.6 m typical · 5.0 m void

Level-to-level

4.40 m via concrete stair

Facade

Board-formed concrete + full-height glazing

Floor

Polished radiant concrete (L1) · oak-finish (L2)

Heating / cooling

Hydronic radiant floors + concealed VRF

Ventilation

Ceiling-mounted ERV, continuous fresh air

Acoustics

Concrete mass + acoustic plaster ceilings

Smart systems

Lighting scenes, shading, keyless entry

Energy target

NYC Energy Code compliant, high-performance glazing

IN SUMMARY

Concrete Ascent proves that brutalism can be warm, bright and deeply livable — a two-storey loft where the city energizes the social floor and disappears entirely on the private one.

Thank you.
